

DO NOW: We will be using the TI-Nspire for our DO NOW and in one of our resources sessions. Do the following 2 tasks as the workshop is under transition during the first 5 minutes.

TASK 1 Explore the TI-Nspire Scientific Calculator. NOTE and INTERACT with the following features:

- The whole device works much like regular computers.
- The first screen, as shown here, is the HOME SCREEN.
- This is the HOME button. When in doubt, always press home to start over.
- Play around with the MOUSE pad.
- Clicking the center button helps you select any of the menus on the screen.
- The yellow “hat” on top of your calculator (not shown in this photo) is the Navigator. It has a name (which will be your alias during the workshop).
- The Navigator is a wireless remote that Annie will use to send and retrieve files on this handheld.

TASK 2 Respond to Annie’s questions through the TI-Nspire Navigator (it works like a “Clicker”). Your responses will be send to Annie’s laptop remotely for a group assessment

- (a) Select **MY DOCUMENTS** in the main menu
- (b) Select the **DO NOW** document
- (c) There are three questions you will respond to, each one under a tab.
- (d) Use the mouse, and center button to respond to a multiple-choice question. Use the keypad to the short answer question.
- (e) When you are done, just leave the handheld alone. Annie will collect your responses remotely.

Tabs, each contain a question
